#### Search Notes

For the score over length search, neither fragment had hits in the EST database, so no EST results are included with the S/L output.

### SEARCH REQUEST FORM

Requester's Full Name: TANE ZARA Examiner #: 77572 Date: 49/19/06
Art Unit: 163C Phone Number: 2-0+61 Serial Number: 707 6 13-176
Location (Bldg/Room#): 2 AS9 (Mailbox #): 2-C18 Results Format Preferred (circle): APER) DISK
LOCATION (DICE) NOOTH, 5 - 1 (1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.1.
To ensure an efficient and quality search, please attach a copy of the cover sheet, claims, and abstract or fill out the following:
Title of Invention: Isolated Genonic polynuc's chron +
Inventors (please provide full names): Tw RYAN
Earliest Priority Date: QCR8CBO 9-24-01
Search Topic: Please provide a detailed statement of the search topic, and describe as specifically as possible the subject matter to be searched. Include the elected species or structures, keywords, synonyms, acronyms, and registry numbers, and combine with the concept or utility of the invention. Define any terms that may have a special meaning. Give examples or relevant citations, authors, etc., if known.
*For Sequence Searches Only* Please include all pertinent information (parent, child, divisional, or issued patent numbers) along with the appropriate serial number.

Generation and initial analysis of more than 15,000 full-length
human and mouse cDNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  3560
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDNA Library Preparation: Life Technologies, Inc. cDNA Library Preparation: Life Technologies, Inc. cDNA Library Arrayed by: The I.M.A.G.E. Consortium (LLNL) DNA Sequencing by: National Institutes of Health Intramur. Sequencing Center (NISC), Gathersburg, Maryland; Web mire. http://www.maryland.
Clone distribution: MGC clone distribution information can be four through the I.M.A.G.E. Consortium/LLNI at: http://image.llnl.gov Series: IRAK Plate: 79 Row: p Column: 19
This clone was selected for full length sequencing because it passed the following selection criteria: matched mRNA gi: 4755145.

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

Web site: http://genome.wustl.edu/gsc Contact: sapiens@watson.wustl.edu ----- Summary Statistics Center project name: H\_DJ0852P06

Center: Washington University Genome Sequencing Center Center code: WUGSC

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by

restriction digest.

MAPPING INFORMATION:
The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgri.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgri.nih.gov, or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

This clone was derived from human PAC library RPCI-5, prepared by Pieter de Jong and coworkers at http://www.chori.org using the method described by Ioannou et al., Nature Genetics 6:84-9 (1994)

The library is from one male donor.
The clone may be obtained either from Genome Systems, Inc. (http://www.resgen.com); or Research Genetics, Inc. (http://www.resgen.com); or from Pieter de Jong.

VECTOR: pCYPAC2

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert o
overlapped by ACO17116 and ACO93086.

APPLICANT: Wohlgemuth, Jay

APPLICANT: Wohlgemuth, Jay

APPLICANT: Woodward, Robert

APPLICANT: Ly, Ngoc

TITLE OF INVENTION: METHODS AND COMPOSITIONS FOR DIAGNOSING AND

CURRENT OF INVENTION: CHRONIC INFLAMMATORY DISEASES

FILE REFRENCE: 506612000120

CURRENT APPLICATION NUMBER: US/10/131,827

CURRENT FILING DATE: 2002-09-06

PRIOR APPLICATION NUMBER: US 10/006,290

PRIOR APPLICATION NUMBER: US 10/006,290

PRIOR APPLICATION NUMBER: US 60/296,764

PRIOR FILING DATE: 2001-06-08

NUMBER OF SEQ ID NOS: 9090

SOFTWARE: Patentin version 3.1

SEQ ID NO 7899

LENGTH: 50

TYPE: DNA

ORGANISM: Homo sapiens
US-10-131-831-7899

Sequence 7899, Application US/10131831
